# GENERAL MERCHANDISE

All car wash lobbies are best served to carry general merchandise items. The increased value to a car wash customer is noted by offering an array of general merchandise items. These items can include wallets, beanies, gloves and sunglasses, just to name a few. These items are available to hang on the wall, put in a counter display, as well as be merchandised in various floor displays. This category's success is based on high profit dollars for the car wash, needs of the customer, and an ever-evolving selection of products. Don't miss out on having the best selection of general merchandise for your showroom.

## MICROFIBER AND TERRY TOWELS

Microfiber towels are great for washing, drying and waxing your ride. They gently remove dirt and grime by using thousands of microfibers to trap particles, preventing scratches to your ride. For drying, they absorb water 3x faster than cotton towels and retain over 7x their weight in water. For polishing, their revolutionary weave combines friction, static electricity and capillary effect to lift, hold and remove wax, glaze, polish and other surface residues with ease.

## CHEMICAL INJECTORS

The CHEM-FLEX™ Injector is an innovative new product whose components are manufactured utilizing Kynar®, stainless steel, Hastelloy® and a proprietary O-Ring material to create the most chemical-resistant injector on the market. CHEM-FLEX injectors are designed to inject fluids or air into conveying liquid under pressure. The water being pushed through the injector creates a vacuum and the chemical or air is inducted into the water stream.

## TIPS KIT

Metering tips are used to control the amount of chemical being drawn into the water stream. Metering tips are placed in the plastic tubing containing the chemicals and water flow. Each tip color allows the chemical to flow at a specific rate. The dilution ratio produced by the tips is measured by the water volume or GPM and pressure or PSI flowing through the plastic tube

## PRESSURE REGULATING VALVE

Designed for use with any positive displacement pump, Hydra-Cell C Series pressure regulating valves bypass system fluid to prevent excess system pressure. They can also be used as pressure relief valves. C Series Hydra-Cell Valves bypass system fluid to prevent excess system pressure. When a system discharge is completely closed – such as a closed spray gun, closed valve or plugged nozzle – the Hydra-Cell Valve bypasses the total system fluid flow. They also balance system pressure for multiple-gun operations. The Hydra-Cell Valve design is simple: a tapered plunger with a valve seat.

## PRESSURE ACTUATED UNLOADER

This is a pressure-actuated unloader designed for any pump that fits within the flow and pressure range of the unloader. The unloader regulates the flow in the system and maintains system pressure via an adjustable nut that controls the amount of tension on a pressure spring. When no flow is going out the outlet port, all flow is diverted to the bypass port at virtually no pressure. The unloader is capable of handling one or more shut-off guns and should be run with no bypass (if the full flow from the pump is going through the unloader). It actuates at around 10% above the system pressure.

## HOSE FITTINGS

The 43 Series of hydraulic hose fittings from Parker Hannifin is renowned for its ease of assembly, wide selection of shape and end formations, hose compatibility, and extensive use across markets. This cost-effective line of permanent crimp-style hydraulic fittings is designed for use with Parkcrimp crimpers to deliver "bite-the-wire" sealing and holding power. When used with Parker's No-Skive hoses, 43 Series fittings can be assembled without removing the outer hose cover, eliminating premature hose failure caused by skiving too long or too short. 43 Series fittings feature one-piece construction with chromium-6-free plating, and are compatible with petroleum-based hydraulic fluids and lubricating oils and with phosphate-ester-based hydraulic fluids.

## FLOW SWITCH

Used for adjusting the maximum working pressure and safe guarding the high pressure water pipes. Ideal for steam combination applications. Low pressure limit eliminates need for additional metering devices. Working components constructed of high-grade stainless steel. PTFE and Viton seals for maximum heat and chemical resistance. Straight flow through design minimizes pressure loss through valve. Adjustable valve allows limit setting on both maximum and minimum pressures. Internal bypass valve can be easily accessed and repaired without removing the unloader from unit.

The General Pump flow switch is designed to operate in response to a low volume, low pressure flow and still allow for a high pump output flow. The system will provide reliable switching with as little as .75 GPM flow and 18 PSI from the city water supply and will also allow pump output flow up to 18.7 GPM at 4,000 PSI with negligible pressure drop through the valve. General Pump flow switches provide durable, reliable on/off switching for systems that require start/stop capability.

Hydro Foot Valves allow one-way flow of chemical concentrations. Prevents solutions from "back-flowing" into supply tubing. Constructed of corrosion-resistant plastic and rubber materials for longer life.

Polypropylene bodies with EPDM or Viton® diaphragms. Polyethylene for chemical lines. Step-down barb design allows for use with 1/4", 3/8" or 1/2" tubing. Designed for one-way flow of product and positive seal against flow in the opposite direction.

The 685 Poppet Check Valve incorporates a thin elastomer disc supported by a poppet that seals on the seat. Pressure in the flow direction moves the seal off the seat at about 1/3 PSI before pressure builds enough to move the poppet away from the seat. Maximum operating pressure of 125 PSI covers a wide range of air and fluid applications. Compact design with a light cracking pressure, high flow rate, and a positive seal at very low back pressure or slight vacuum. An embedded O-Ring Poppet is supplied for cracking pressure applications 1/2 PSI and higher Hastelloy® is a superior chemically resistant spring material.

## DEMA SOLENOID VALVE

Diaphragm solenoid valves are available for 3/8-3/4" pipes, have orifices from 9/16-3/4," are constructed of brass or stainless steel, and have stainless steel seats. When energized, the plunger is pulled to the top plug, thus opening the small "pilot port" in the center of the diaphragm plate. This releases the pressure on top of the diaphragm allowing incoming pressure to lift it off the large center port. When de-energized, the solenoid plunger is pushed from the top plug by the kick-off spring and closes the pilot port. Fluid passes through the diaphragm bleed hole until pressure is equalized on both sides of the diaphragm to shut off the large port.

## REGULATORS

The valve regulates the maximum pressure of the system by varying the flow discharged by the bypass. This product is intended to be incorporated on a finished machine and used with clean fresh water.

Piggybacks are compact and most effective when space is a constraint. Piggybacks can be ordered with different filter elements and can be modified with different springs, depending on the filtration and air regulating requirements.

Air line regulators provide controlled, consistent air pressure as required for specific pneumatic equipment connected to the air system.

Sprockets are rotating parts with teeth that are used in conjunction with a chain and, almost always, at least one other sprocket to transmit torque. Sprockets and chain can be used to change the speed, torque, or original direction of a motor. In order for sprockets and chain to be compatible with each other they must both have the same thickness and pitch. In order for the sprockets and chain to work effectively, all of the sprockets should be on parallel shafts with their corresponding teeth on the same plane
